

# 3 Ways to Convert - how to choose

Our web to PWA Converter tool has different options for you to choose from. Click on the card to select it. You can see a Branded PWA Wrapper is [selected](#) on the sample picture.

### Simple PWA Wrapper

- + it is ready now!
- + just use the link below, your app will be accessed from that link
- + works well with simpler websites
- does not work well for sites with login forms and/or cookies as variables

### Branded PWA Wrapper

- + easy, but needs 10 more minutes
- + the app is accessed from your domain
- + works with login forms and most cookie variables
- you need to have access to your domain admin panel to create 2 CNAMEs
- may need more tweaking, or not perform all functions for very complex apps, like some shopping apps, etc.

### Branded PWA JS Capsule

- + best for complex websites, like shops, apps with payments etc.
- + fully works from inside your website
- will require more time and skill to set up, up to one hour
- you need access to your website admin system to add our JS snippet and 2 JS files to your website

Making the right choice depends on how complex is your current website and what kind of access you have to your site management tools. You can simply check this options one by one to learn which way works best in your case. All these take under 1 hour time.

The table below explains your choices.

Notation:

"-" means will not work,

"+" means will work 100%,

"+/-" means may or may not work, depending on the case,

"blanks" mean unimportant .

	Simple PWA Wrapper	Branded Domain Wrapper - iFrame	Branded Domain Wrapper - NO iFrame	Branded Domain PWA JS Capsule
Website is a simple information collection	+	+	+	+
Website has login forms	-	+/-	+	+
Website relies on cookies as variables	-	+/-	+/-	+
Website has HTTP only cookies	-	-	-	+
Website is located at main 2nd level domain, like "example.com"	+	+	+	+
Website is located at 3rd level, like "nnn.example.com"	+	+	+	-
You can add buttons and links to your website	+	+	+	+
You have access to web domain admin panel to create CNAMEs		+	+	
You have access to website admin to add JavaScript and other files				+
Your website does not allow iFrame, xFrame in cross domain options	-	-	+	+

**For detailed info on how to launch each type of Converter go to:**

1. [Simple PWA Wrapper](#)
2. [Branded Domain Wrapper](#)
3. [PWA JS Capsule](#)

**Note that** by default both "Simple PWA Wrapper" and "Branded Domain Wrapper" work in iFrame. So your website will be opened in app from within the iFrame, which sometimes can be turned off.

If your website does not allow iFrame, xFrame (in this case your app screen will stay blank after you install it) you have the options:

- 1) to allow xFrame cross domain option for the [mobsted.com](https://mobsted.com) domain - ask your web admin for that
- 2) is to go for Branded Wrapper and choose - "Take it out of iFrame" option in it's settings
- 3) go for JS Capsule, which works directly with your website by default.
