

Statuses of Events

Mobsted platform allows assigning **Statuses** to each **Event**. For example, a status of a submitted document, or of a purchase made, or a customer complaint, you can change statuses and track until the resolution.

You can have your own custom column in Events table or use this functionality. Statuses table makes it easier tracking events and updating platform's backend users and/or app users on the progress of an Event. This can be done automatically, with **Triggers** based on Event status **filter**. Statuses are also available for reference in **#hashtags#**.

Manage Statuses

Open an app in **Constructor** > Click **Statuses**, in the header menu in Section App Data - **ORANGE** mark

? Unknown Attachment

There are always **2 default Statuses**, which as **Open** and **Close** statuses of any work flow. These can not be deleted. You can have up to 9997 statuses in the middle.

To **Edit/Copy/Delete** existing Status - **BLUE** MARK

Add new Status - **RED** mark

Add/Edit a Status:

? Unknown Attachment
