

2021, 11 (Nov) - minor - SMTP for PIN codes

As of November 25th, all emails with a security code are prioritized to go through your account's own SMTP settings, if those settings exist and are valid. NOT through Mobsted's centralized email gateway.

Earlier SMTP was only used for triggered email messages, not for system messages.

The screenshot shows the Mobsted account settings interface. The top navigation bar is blue with icons for GENERAL, INTEGRATIONS, and a profile icon. Below the navigation bar, there are tabs for Billing, Messages, Statistics, Payments, and JWT. The Messages tab is selected. On the left side, there is a sidebar with links for Email, Mailgun, and SMS - smsc.ru. The main content area is titled 'Email' and contains several input fields for configuration: Host, Port, SMTP Secure, SMTP Auth, Username (with 'xxx' entered), Password (with '*****' entered), and Set "from" field. There is a green 'Save changes' button and a 'Test SMTP - enter your email' section with a 'Test' button. At the bottom, there is a copyright notice: '© Copyright 2014 - 2021, Mobsted, Inc. All rights reserved.'

Another way to use your own email settings instead of centralized is to add a Mailgun.com account to your Mobsted account settings.

NOTE that if the SMTP password is filled the first attempt is sent using SMTP. If the SMTP attempt fails, then Mobsted will attempt to use your Mailgun account.

As usual - Looking forward to your questions and comments in the Support channels.
