

2022, 07 (July) - MAJOR - New Page Drawing Engine

Yes, we know. It took tooooooooo long to do this. We were getting lots of requests from ~~LARGE~~ HUGE size apps that screens where data is pulled in with [L](#)oops.

WAS

The screens were slow to open and pictures blinked several times, when say when you have 100+ screens in the app and some screen pull in say 500 items of data at once, like on a shop catalog page.

NOW

The speed was improved about 3 times for apps with lots of screens and lots of dynamic data on some screens.

A more detailed description of this mechanism is located in the [Deploy Changes page](#) of the General Intros section.

[As usual - Looking forward to your questions and comments in the Support channels.](#)
