## Upload/Delete File to/from Object's column

1 you have to add "Upload file" component on your screen

- 2 we have a few hashtags for this component, and you can use its
- 3 save uploaded file id into the file column using action and hashtag (see next picture) hashtag example #Backendname:uploadfile-1:0:id#

To delete file from object's column you should write empty string to file column (see picture below)
